FIN

# Fin – the revolution in standing work

# Fin – no more stress from working standing up

Almost every other employee has to work standing up for long periods of time. But standing over prolonged periods subjects the human body to significant stress, and is responsible for a number of complaints relating to the heart and the circulatory and musculoskeletal systems.

Fin provides the ideal solution in all those areas of work where until now it has not been normally possible to sit down, but where standing up all the time is too tiring. Because Fin takes away the stress from those who have to stand up to work, allowing them to concentrate on their performance at work rather than being distracted by the discomfort of standing up. Fin takes as much as 60 % of body weight off the legs and feet, and

redistributes it comfortably over the wide seat and the ergonomically inclined column – without restricting the operating radius. This is gentle on the circulation, joints, ligaments and tendons, and holds the spinal column in place. Previous standing rests were not suitable for most standing workstations because they took up too much space, or were too complicated to use, or were not stable enough. But Fin has revolutionised standing work, because Fin

- is 100 % intuitive to use,
- is space-saving,
- is wonderfully comfortable,
- is secure and feels safe,
- is light and easy to move around,
- supports the musculoskeletal system.

# Find out for yourself how versatile **Fin** is

**for industry, service providers, offices,  
retail or laboratories ...**

... Fin is the specialist in working standing up. It cleverly closes the gap between standing and sitting. Fin's minimalistic, understated and elegant design blends perfectly into any working environment you can think of – from production line to hotel reception. Combining Fin with tables, counters, workstations and appliances is no problem at all. At last, Fin makes it possible to meet the highest aesthetic and ergonomic requirements of standing workstations.

Find out for yourself! Explore Fin's wide range of applications and functions on the following pages.

**Fin:** ideal for standing work on the shop floor

*“The valves need to be retightened.”*

#### **Stable base**

The stable base and the robust aluminium column which is inclined by 4 degrees ensure complete stability while moving, and encourage the correct active working posture - bending slightly forward.

**Fin:** ideal for standing work in the laboratory

“Let’s all have another look at the series of tests.”

**Practical and comfortable to use**

The practical comfort handles are integrated in the side sections of the washable seat. This provides a feeling of safety at all times, when sitting down, bending over, and standing up. Fin can be moved around very easily by using the integrated handles for holding, pulling and carrying.

**Fin:** ideal for standing work in the service sector

*“This is the best solution for your requirements.”*

**Sit comfortably**

The extra wide comfort seat made from Soft Touch PU foam invites you to sit on it, and gives you the most comfortable sitting experience, even when you are sitting for a long time.

**Fin:** ideal for standing work in R&D

*“This detail is conclusive in this case.”*

**Work dynamically**

The comfort seat can be swivelled 20 degrees to both left and right. This creates flexibility and freedom, increasing the radius of operation, and so making it possible for the user to tackle every task in a dynamic way.

**Fin:** ideal for standing work in retail

*“With pleasure.  
Thank you for  
buying from us.”*

**Easy to adjust**

The individual height of the seat can be adjusted easily and steplessly using the handle underneath the seat. As soon as you sit down, you experience maximum sitting comfort as the gas spring gives gently, and cushions your weight.

**Fin:** ideal for standing work in the office

*“Let us go through the draft once more.”*

**Streamlined design**

Fin cuts a fine figure – not only in the office.  
Fin’s clear, space-saving design means that it can quickly find a suitable space in any situation; Fin is proud to be seen.

## Design

## Phoenix Design

The roots of Phoenix Design's success lie in the time-honoured traditions of classic German design. Andreas Haug and Tom Schönherr, founders and owners of the company, define their design philosophy as an attitude. The fundamental values of this attitude include ethics and aesthetics, economy and ecology, precision and innovation, all of which are reflected in the design of the innovative Fin standing work rest – uncomplicated, appealing, light and high-quality.
