experts in seating[®]

Doing your job with ease. If you can do that then you're a true professional. This also applies to all our expertise. You don't notice it – and that's exactly what makes the difference. Because after a day of sitting at work on one of our seating solutions, you still feel great. No lower back pain. No sore shoulders. No restless feeling in your legs. Because we're professionals who invisibly take care of other professionals. And we're very proud of that. With us you'll be sitting pretty.

Take a seat.

our esd work chairs

page 16

just sit healthy

page 62

Sitting ergonomically so you can work comfortably and feel fit and flexible. That's our goal. To achieve this, we develop and manufacture ergonomic work chairs that really make a difference. Exercise is important, but we believe sitting has to be healthy as well.

'We' are the approximately sixty problem solvers who are Score. We develop and manufacture our seating solutions in our own factory in Tolbert, in the province of Groningen in the Netherlands. We apply the most recent ergonomic standards, the latest techniques and best materials while taking all the challenges faced by people in sedentary professions into account. People stand at centre stage with us. Or better said, sit!

our own path

At Score, we like to do things our own way. Maybe our designs aren't trendsetting, innovative or super modern, but they are solid, robust and a little quirky. Solid chairs that you can literally use for decades. We don't follow the crowd but pave our own way! We listen to our customers' experiences and base our plans on what they tell us. When we see opportunities for improvement, we investigate together to see how they can be implemented. This has made us a reliable player in the market over the years.

our mentality

We value our relationships very much. Connecting people with short communication lines, honest and transparent; that's what we stand for. We want the best for everyone, both internally – for our colleagues – and externally – for dealers and customers who takes a seat on our products. If you are able to enjoy doing the things that are important to you, and we can contribute to that in our own way, then we're satisfied.

we take the burden off you

You deserve the perfect work chair. One you never have to worry about. This may sound a bit vague, but what matters is that our craftsmanship takes the burden off of you. There's always room for improvement. Whether it's our processes, products or your sitting posture. Because we may have great ideas, but it's your experience that counts. We improve ourselves by listening - to the market, to the developers of new technologies and to you as a user. *Learning by listening.* That's Score.

our promise

We're problem solvers. Every component in our products has a function and everything is there for a reason. Because quality is all about the details. That's why we call ourselves *experts in seating*. We know the ins and outs of the various Industries we develop our products for. Even yours. So we work every day to ensure that you experience this too. That while you're sitting, you really feel that we're thinking along with you... and ahead. We find solutions to problems you didn't foresee yourself. With an eye for detail, with passion and inspiration. Sitting comfortably so you can concentrate on doing your job. That's our promise to you.

a chair for every workplace

There's simply no such thing as one universal (work) chair, perfect for every user and work environment. Different requirements apply to a chair in a workshop than to an office chair. At Score, we made a distinction between four major branches – Dental, Medical, Industry and Office – each with their own specific work stations and associated activities. So we developed a range of seating solutions that take into account both workplace-related requirements and the wishes of the user. After all, sitting comfortably and ergonomically while working is paramount at Score. Whatever you do, wherever you work.

Dental, Medical, Industry, Office

We have a suitable seating solution for (almost) every workplace. Even if you work in a cleanroom or ESD safe space. We have developed ergonomic chairs for these workplaces, made of different materials. You can provide them with handy options for extra support, they meet ESD and Cleanroom requirements and of course fit perfectly. This way we ensure that you can sit energetically and relaxed so you can focus entirely on your job.

We've got your back!

Check
scoreseating.com
for our entire
product range!

Of course, our work does not stop at developing, producing and selling chairs. We also give advice, think along and answer every question you have. That's service.

service and warranty

Score work chairs are made with craftsmanship from high-quality durable materials in our own factory in Tolbert and are exported to more than 50 countries. Our chairs have a standard 5-year warranty. Ask about the exact conditions.

extensive dealer network

Score supplies nationally and internationally through selected dealers only. There's always a Score dealer nearby. Well-trained workplace advisors at Score can advise on the best seating solution for your specific workplace in consultation with the Score dealer.

fast delivery service

Through our special fast delivery service, we ship a selection of high-demand chairs within 3 business days. Ask about the exact conditions.

trial period

See an interesting seating solution? Ask your dealer about the possibilities to try out a product.

showroom

You are also very welcome in our showroom, where you can easily compare a number of different seating solutions. From ESD safe to Cleanroom work chairs and from the Score Spirit Line to the Score 4400 Pro Line, with footring, footboard or other options: if you make an appointment in advance, our experts will discuss all the advantages of the work chairs you are interested in.

own product development and production

Bending steel, welding seams, drilling holes: a good product is perfect down to the smallest detail. That's why everything is done with equal care at Score: from assembly to packaging. In our own factory in Tolbert, our technical professionals work on our products with great precision. Products we develop ourselves! And our factory and office are located right next to each other. This means the communication lines between our product developers and production employees are short, allowing us to respond quickly to dealers and customers. We all work with heart and soul on new seating solutions that meet the current ergonomic standards and we keep everything in-house. We enjoy working together and being inspired, but we're also specialists and convinced of our expert craftsmanship. We pave our own way. That's Score!

the chair for esd safe workplaces

These special versions are constructed from conductive materials and fabrics that can transfer electrical charges safely to the floor or a grounded point in the workplace. Ideal when static electricity caused by, for example, friction between different materials can be detrimental to electrostatic-sensitive components.

You'll be sitting pretty with Score!

a functional friend for all

A no-nonsense work chair, but ergonomically designed, provided with all the functions you need and suitable for almost everyone who works in an ESD safe environment: that is the Score Ergo 2300 ESD. An antistatic, conductive work chair that we have been supplying for decades and that we are very proud of. And as accumulated static electricity is safely dissipated through the conductive parts in the chair, it is perfect for ESD safe working environments.

- Gaslift height adjustment
- Back height - and back angle adjustment
- No-nonsense work chair for anyone working in an ESD safe working environment
- Functional and robust craftsmanship

our camouflaged powerhouse

Do you have a taller or broader build and therefore want a chair that can take some rough treatment? Then the Score 5000 is perfect for you. This powerhouse is more spacious than the average work chair, but no one will notice. The ideal chair for people up to 120 kilos. We even have a heavier version for people up to 150 kilos. Thanks to the Score 5000's various adjustment options, you'll be sitting super comfortably.

- Strong and robust ESD safe chair, suitable for a variety of working environments
- ESD safe office chair for people with a slightly broader stature
- Gaslift height -, back height - and back angle adjustment
- Extra comfortable thanks to many adjustment possibilities

the stool for a medical setting

A medical, ESD safe working environment calls for very specific furniture. These work chairs and stools not only have to be compact and manoeuvrable, but also perfectly cleanable, antistatic and highly conductive. That is precisely why we have developed the Score 6101 ESD and the Score 6211 ESD. It is perfect in terms of both materials and comfort. It is easy to pick up, is very comfortable and is made of ultra-strong, hardwearing leatherette. This is the ideal stool for brief examinations or general use in medical examination rooms and laboratories.

- Easy to clean, made of hardwearing materials
- Antistatic and good conductivity
- Extensively tested
- Comfortable and durable

the dynamic shape of sitting

When you think of a saddle chair, what first comes to mind is the Score Jumper or the Score Amazone. On the ergonomically shaped saddle seat, you automatically assume a healthy sitting position when your feet are firmly on the floor. Your back relaxes in a natural way, which not only improves your breathing but is also good for your circulation and digestion. And you're also very mobile on a saddle chair. It's perfect for people who spend a lot of time at a desk or at a computer in ESD Protected Workplaces (EPA).

- ⊞ Alternating between standing and sitting
- ⊞ For good breathing, blood circulation and digestion
- ⊞ Available in a high and low model

sitting comfortably in demanding workplaces

Our Score Pro 4400 ESD safe work chairs are robust and durable but at the same time incredibly comfortable. Ideal for industrial work environments as well as laboratories and (ESD safe) workplaces, because they're very suitable for this demanding work. The PU (Polyurethane) seat and back feel wonderfully soft, while the material is resistant to various chemicals and very easy to clean. That will sit well with you. The chairs from this line are available with a footring or footboard, so they're suitable for high workplaces.

- ⊞ Very easy to clean

filtered ergonomics on a cleanroom work chair

Where is it more important to be able to work dust-free than in a cleanroom? We also developed a line of ideal seating solutions for this. These unique work chairs have a seamless seat and back made of artificial leather and a built-in HEPA-filter, so the displaced air is always filtered immediately when sitting or moving. This makes it impossible for dust particles to enter the room, which is of course extremely important in a cleanroom.

You'll be sitting pretty with Score!

Need advice from an **expert in seating**? We are happy to help you find the best solution.

Wider seat: 44 x 30 cm (W x D)

Work surface height 80 - 100 cm

Narrower seat: 34 x 30 cm (W x D)

Ergonomically responsible and active sitting

Height adjustment 57 - 76 cm

Promotes active sitting posture

Height adjustment 57 - 76 cm

Fabrics and materials: a world of possibilities

Water resistant Conductive Fire retardant Ventilating Each fabric and each material has its own unique properties. Handy, because the many various working environments require different seating solutions. But we think further than just the practical aspects. Many of our fabrics and materials are available in a wide range of colours you can choose from. Because we like to give people as many options as possible, so they get a chair that suits them even better. Here's a list of all of them.

Our chair, your fabric

Want to send us your own fabric? Even that's possible at Score. If you purchase and deliver the fabric to us (minimum roll width of 1.40 metres), we'll use it for the upholstery. There is an additional cost; you can find the details on our website. We cannot be held liable for the warranty, product quality and processing of the fabric. Want to learn more or discuss? Feel free to contact us. We're here to help you find solutions.

ESD dralon

Available in the branches:

industry

Available in the colours:

D07 D89

Material: Dralon-Bekinox
Weight: 560 g/m²
Characteristics: • Durable synthetic
• Antistatic
• Very wear and tear resistant
• Easy to clean
• Water and dirt repellent

ESD leatherette

Available in the branches:

industry

Available in the colours:

K07

Material: PVC/CO/RES
Weight: 630g/m², +/-50 g/m² cotton knit
Characteristics: • Antistatic
• Easy to clean
• Water and dirt repellent
• Large surface area

PU SP ESD

Available in the branches:

dental medical industry

Material: Polyurethane
Characteristics: • Resistant to various chemicals
• Soft to the touch
• Easy to clean
• Can take a beating
• Durable

People generally spend more time sitting than standing. At home, but mainly at work. And that's not good for our bodies. At Score, we focus on seating solutions, because we believe that sitting should also be healthy.

Sitting comfortably makes work more pleasant and you can concentrate better. After a workday you have more energy left to do fun things and you prevent physical problems. Because employees who sit a lot – have to stand for a long time or make repetitive movements for their work – often force their body into a certain position for a long period of time. When that posture is wrong, it quickly leads to physical irritation and fatigue, which in the longer term can lead to physical complaints, with long-term sick leave as a possible result.

Investing in 'good sitting posture' is a golden investment for companies and quickly pays for itself. It's one of the few affordable ways to increase employee productivity and prevent sick leave.

Happy employees, happy employers!

Our solutions to the law of cause and effect

Standing or sitting slightly incorrectly can have big long-term consequences. In the diagram on the right you will find an overview with complaints, causes and a possible solution. Do you have another problem or a question about it? Feel free to contact us. Our well-trained workplace advisers are experts on sitting and will be happy to advise you on the best seating solution for you and your specific workplace.

Complaint

Restless legs, irritation and loss of concentration

Irritation and loss of concentration

Neck and back problems

Fatigue and loss of concentration

Neck and shoulder complaints

Restlessness, lack of concentration and neck and shoulder complaints

Back complaints and fatigue

Cause

Seat is too high, feet don't touch the floor so no possibility to shift position and inhibits blood circulation

Seat depth is too small, so no possibility to shift position

The lack of a (non-adjustable) backrest, resulting in a bent trunk position, unilateral load on the joints and muscles in the back and more difficult breathing due to compression of the abdominal cavity

Unstable chair or seat, the body is constantly trying to find balance

Chair is not rotatable, resulting in uneven strain on the joints and intervertebral discs of the spine and on the ligaments and muscles in the back

The lack of – or inability to adjust – armrests, the body unconsciously searches for possibilities to rest the weight of the arms

Backrest does not provide sufficient support to the lumbar region, which puts too much strain on the spine because it cannot assume its natural position

Solution

Adjust a higher work chair, place a seat to the right height or a separate footrest with foot control

If possible, increase seat depth. Otherwise a work chair with sliding seat

Work chair with adjustable backrest

Work chair with a sturdy and stable base

Rotatable work chair

Install height and width adjustable armrests

Work chair with an ergonomically shaped backrest that fits into the lumbar region

A good work chair helps you stay focused, even after hours at your desk or precision work in the same position. It supports you in the right places and prevents physical irritations, muscle pain and fatigue and is easy to adjust so it suits you optimally in terms of height, seat depth and inclination.

Being able to move on the seating material without sliding off is also important. And it has to be easy to clean. In demanding working conditions with, for example, chemical substances, the chair's material must be robust yet comfortable. PU (Polyurethane) is a perfect example. It's strong yet soft, incredibly durable and easy to keep clean. If you have a high workplace and your feet don't touch the floor, choose a footrest or a chair equipped with a footring or foot plank. If you are quite tall, the seat depth must be extendable so your upper legs get enough support. And what about electrostatic conduction? Our ESD safe chairs allow the current to dissipate safely. This prevents damage to electrostatic-sensitive components. No need to worry about that. We make sure everything is as it should be.

Stepless backrest with an even curve that supports the lower part of the back and lumbar region

Inclination of the backrest and seat can be easily adjusted

The backrest and seat are quick and easy to adjust in height

Seat depth large enough to shift position regularly, for tall people with extendable seat

Rotates smoothly, has a 5 star base and a circumference that suits the situation

Wider backrest and seat for large and/or tall people

Armrests can be adjusted in height, width and depth

Almost flat seat that is rounded at the front extra wide for large people

Easy to clean, material that is not too rough and not too smooth

Easy adjustable gaslift height adjustment

If the feet cannot reach the floor, a solid footboard or footring

When people start a new job, they often just take their seats and the focus is more on their new colleagues and the work rather than on how they sit. This makes sense. Nevertheless, it is important to also pay a little attention to how you sit, and to adjust your chair properly.

Important for an optimal sitting posture is that you sit relaxed. For this, your joints should be in a neutral position - i.e. not at an uncomfortable angle. Sitting in the same position for long periods should require as little muscle strain as possible. And you should have room to vary your posture while sitting. The latter means that the seat is large enough and that you have enough room to move your feet. And then, of course, there are the settings of your chair. We'll go through those in the steps opposite.

Set your chair to the correct height

Just sit down and relax your shoulders. Place your hands on the work surface and make sure your forearms are at a 90-degree angle to your upper arms when setting your correct seat height.

Set your back support

Adjust the height of your backrest so the curve fits nicely into the curve of your back. This way, the backrest fits nicely and supports your back in the right place.

Set your footrest

If you sit at the correct seat height, your hip and knee joints will form a right angle and your feet will be flat on the floor. Is the latter not the case (dangling legs)? Then you need a footrest.

Set your armrests

Adjust your armrests to the correct height, width and depth. Relax your shoulders and let your arms hang down and rest your forearms on the armrests so your upper arms and forearms form a 90-degree angle.
